

Join us for a conversation about health science in the Sacramento community. Scientists share their research and perspectives, while addressing your questions.

SEPTEMBER TOPIC OSTEOARTHRITIS - WHAT IS IT? CAN WE PREVENT IT?

95% of patients with an osteoarthritic joint can recall having injured that joint. While we treat injuries for swelling and pain, we could also treat the injury very early to decrease the chance of arthritis forming in the future. Learn about new research findings, suggesting we should re-think how joint injuries are treated.
